Step 2: Installation Gaudi software on LG WP400 webOS player

Before installation of the Gaudi software you must have completed the first step (Setup your LG webOS player). Once you've done that you are ready to carry out the next step.

1. Press the settings button and select the **EZ Settings** option. Select the purple icon called **SI Server Settings**.
2. In the SI Server Settings menu, please set the following options:
 - a. Set the **Fully Qualified Domain Name** to **On**.
 - b. Set the **URL** to be: **<https://get.gauddi.com/lgapp/lgapp.zip>**
 - c. Set the **Application Launch Mode** to **Local**.
3. Next to the Local Application Upgrade option, please select the **Remote** option, and then confirm to begin the application install process on to your LG monitor.
4. After a short time a message will appear on the monitor confirming that the Gaudi software for LG webOS client installation has been successfully installed.
5. Please turn the LG webOS player off and then (after 10 seconds) back on and Gaudi will start automatically after around 10 to 20 seconds.
6. The LG webOS player will check if the correct firmware is installed. If not, it will ask to download and update the firmware. The firmware size is 450-600mb. The download time depends on your internet connection. Press **OK** to continue.
7. Congratulations! You have now successfully configured your LG webOS player with Gaudi. You only need to connect your LG webOS player with Gaudi CMS. To do this, please go to third and last step.

Step 3: Connect your LG WP400 webOS player with the Gaudi license

Before you can connect to Gaudi CMS, you will need to carry out two previous steps: the first one is setup your LG webOS player and the second one is to install the Gaudi software on your LG webOS player. Finally you connect your LG webOS player to Gaudi CMS.

Open cms.gaudi.com (option 1)

1. Prior to this installation you purchased a license.
2. Open a browser on your phone or desktop computer and head to cms.gaudi.com. Login using your credentials.
3. Go to the top right corner and click **register player**. Enter the registration code, this is the 8 digit number on the monitor. Give your player a name.
4. Press **register**. Your LG webOS player will automatically connect with the Gaudi cms.
5. You can start creating and scheduling professional-quality campaigns. Need help? Watch our [How-To-Video on how to create Campaigns & Playlists](#).

Received a code from Gaudi (option 2)

1. Please make sure you see an 8 digit number on the monitor. Press **8, 8, 8, 8** on the remote.
2. Now you can enter the code you have received from Gaudi. After entering, press **“OK”**. The system will confirm that the LG webOS player is registered to the Gaudi CMS.
3. Open a browser on your phone or desktop computer and head to cms.gaudi.com. Login using your credentials.
4. You can start creating and scheduling professional-quality campaigns. Need help? Watch our [How-To-Video on how to create Campaigns & Playlists](#).
