Step 1:   Setup your LG webOS monitor

If this is the first time you use the LG webOS monitor, you will need to carry out the following steps.

Turn on your monitor

1. To begin with the setup use the remote to turn on the LG monitor wait for it to fully power on.
   a. After a few seconds you should see the Language Selection menu, go through this menu and press **OK**.
   b. If your monitor doesn't boot to this menu you should perform a **Factory Reset**. How to do this, you can read in the tutorial: **Factory Reset**.
2. After Language and Country selection, you arrive in the **Rotation Menu**. If the monitor will be used in portrait mode, you can change **OSD Portrait Mode**. Please do not change **Content Rotation**. Press **next**.
3. Set your **internet connection**. It is preferable to use a wired connection. Press **Connect**.
4. **On/Off timer**: Please do not use this On/Off timer. You can manage the power on and power off in the Gauddi CMS. Press **Done.**
5. Congratulations! Your LG webOS monitor is now ready for the Gauddi software. To do this please go to the next step.
